Affonso Referral Requirements Analysis

Your requirement **partially matches** what Affonso can do, but there are a few **critical gaps and structural differences** you should be aware of. While Affonso is great for general affiliate software, it is not built natively for "two-way dual-sided automated user referral programs."

Detailed Requirements Breakdown

1. "Anyone can refer... each user has their own unique promo code."

- **Affonso Match: Yes.** You can enable public sign-ups on your affiliate portal so anyone can join. Affonso natively supports Unique Affiliate Coupons (via integrations like Stripe), which automatically generates a unique promo code for each partner.

2. "If A refers B, both A and B get 20% money of the package price."

- **Affonso Match: No (not natively).** Affonso is designed as a *one-sided* affiliate platform—it tracks and pays out the **referrer (Person A)**. It does not automatically manage or distribute financial rewards/credits to the **referred customer (Person B)**.
- *Workaround:* Person B can get a 20% *discount* at checkout using Person A's promo code, but if Person B actually needs to receive a 20% *cash payout reward*, Affonso cannot track or handle that side of the transaction out of the box.

3. "If A's promo code is used by different people, each user gets 20%, and user A gets 20%."

- **Affonso Match: Partial.** If Person A's promo code is shared, Person A will repeatedly get their 20% recurring commission on every single purchase made with it. However, as mentioned above, Affonso cannot route cash rewards to those new buyers automatically.

4. "If a referred user leaves our company, then they won't get payment."

- **Affonso Match: Yes.** Affonso links directly to your billing provider (like Stripe or Paddle). Because commissions are calculated on active subscription billing events, if a referred customer cancels their package or leaves your company, the billing stops, and Affonso automatically stops generating commissions for that customer.

5. "This money is paid every month to all referring users."

- **Affonso Match: Yes.** Affonso features a Monthly Payout Frequency option. You can choose to have these payouts handled completely automatically using their Managed Payouts feature or pay them out in bulk via PayPal/Wise.

Summary Evaluation Matrix

Your Requirement	Supported?	Details
Open referral signups	**Yes**	Anyone can join your public portal.

Unique Promo Codes	**Yes**	Generates unique codes mapped to your payment provider.
20% to Referrer (A)	**Yes**	Standard percentage-based recurring commission.
20% to Referee (B)	**No**	Can give B a 20% *discount*, but cannot track a 20% *cash payout* to them.
Stop pay if user leaves	**Yes**	Automatically handles cancellations and stops commissions.
Monthly Payouts	**Yes**	Can be automated monthly via Wise/PayPal.

Final Recommendation

If your goal is to give **Person B a 20% discount** at checkout, and **Person A a 20% monthly cash commission**, **Affonso will work perfectly**.

However, if your rules strictly dictate that **Person B must also receive regular cash payouts** just for buying, Affonso is the wrong tool. You would need to build a custom solution or look into dedicated viral loop referral software (like *Viral Loops* or *GrowSurf*) designed specifically for dual-sided reward mechanisms.
